Preface	iii
Chapter 1. Introduction	7
1. The Structure of the Text	7
1.1. What is Deformed?	7
2. Structures and their Properties	8
3. "General Theory"	9
3.1. Gerstenhaber program (theory)	13
3.2. Quantization functor	13
3.3. Poisson Manifolds and Quantization	14
4. Deformations in Physics	14
4.1. Relativistic physics	14
4.2. Quantum Theory	15
4.3. Quantization in Physics	16
4.3.1. Mechanics	16
4.3.2. Electrodynamics	17
4.3.3. Field theory	19
4.4. Statistical Description	20
4.5. Gauge Theories	21
4.6. Integrable Hamiltonian systems	21
Chapter 2. Structures for Deformation Theory	23
1. Associative Algebras	24
1.1. Algebras	25
2. Coalgebras	26
2.1. Cofree Coalgebra	27
2.1.1. Comultiplications, counit	30
2.2. Cofree comodule, coalgebra	30
2.3. Multiplicative Element and Cup-product	31
2.3.1. Cup Product	31
2.4. Multiplicative Element	32
2.4.1. Multiplicative Elements	33
2.4.2. Multiplicative Elements	39
2.4.3. Cofree coalgebra and multipl. matrix	41

2.5. Duality	41
2.5.1. For a coalgebra and an algebra	41
2.5.2. For bialgebras	42
3. Bialgebras and their Actions	42
3.1. Bialgebra Structure	42
3.2. Hopf Algebra Structure	47
3.2.1. Definitions. Hopf algebras	48
3.2.2. Category and special Hopf algebras	48
3.2.3. Hopf algebras	49
3.2.4. The quantum double	49
3.2.5. Twisting	50
3.2.6. Path Bialgebra of a Quiver	51
3.3. 4-modules	52
3.4. $B$ -module Algebras	52
3.4.1. $B$ -module Algebras and Coalgebras	54
3.4.2. BME and Smash Product	54
4. GE in Bialgebras	54
4.1. General Equation	55
4.1.1. Add to GE as example	57
4.1.2. Graded case of GE	57
4.1.3. Bialgebra acted on $k[x]$ and other examples	58
4.1.4. Gauge group	59
4.1.5. Direct solution of GE in $k[x]$ with $\Delta(x) = x \otimes x$	60
4.2. GE in a finite dimensional bialgebra	62
4.2.1. Quiver bialgebra	63
4.2.2. GE in a quiver algebra	63
4.2.3. Gauge group action in $B \otimes B$	64
4.3. GE	67
4.4. HGE or $GE_\infty$	68
4.4.1. Graded bialgebras	70
4.5. GE in $k[x]$ –NEW	70
4.5.1. (GE) and QYBE	74
4.5.2. YBE and Braids	74
4.6. Solutions in commutative bialgebras	75
4.7. Computations with $aff(1)$	75
4.8. New approach	77
4.9. Elements $P_h$ and trivialization of deformations	78
5. Homology	79
5.1. Homology of Associative Algebras	79
5.1.1. Cup product	81
5.1.2. Circle product	81
5.1.3. Lie algebra structure	82

5.2. Results of Computations of Cohomology	84
5.3. Formal deformations	84
5.4. Bar-resolution	85
5.5. Homology of Coalgebras	86
5.5.1. Cohomology of $U(\mathfrak{g})$	87
5.6. A Nonlinear Version of Bialgebra Cohomology	88
6. Other Algebras	88
7. Manifolds	88
7.1. Formal manifolds	88
7.2. Graded case	89
7.3. Frobenius manifolds	90
7.4. Jets and Moduli Spaces of Geometrical Structures	90
8. Operads	91
8.1. Definitions	91
8.2. Elementary operations	92
8.3. Operad algebras	93
8.4. Modules over an operad algebra	93
8.5. YBE in an operad bialgebra	94
8.6. Smash product	95
9. $A_\infty$ operad	96
9.0.1. Morphisms of $A_\infty$ -algebras	99
9.0.2. The bar-construction	99
9.1. Applications ...	100
Chapter 3. Deformation Theory for $d^2 = 0$	103
1. General construction for deformations	103
2. Master equation	104
2.1. ME (as) and a Master Equation	105
2.2. Behavior of Cogomology under Deformation (Perturbation)	106
3. Differential graded Lie algebras	108
3.1. Definitions	109
3.2. Gerstenhaber algebras	110
3.3. Maurer-Cartan equations	111
3.4. The functor of deformations	112
4. Zero Square Theory	113
4.1. Definitions	114
4.2. Cofree Coalgebra	115
5. Deformation functors	117
5.1. Odd Lie superalgebras	118
5.2. Cohomology as formal supermanifold	118
5.3. Differential Gerstenhaber-Batalin-Vilkovisky algebra	119

6.	Trivialization	120
6.1.	Smash product	120
6.2.	Deformation of a Smash Product	123
6.3.	Abstract trivialization (a bad variant ...)	124
6.4.	Construction	124
6.5.	Gauge Group	126
6.6.	Jump deformations	126
Chapter 4. Deformations of some Structures		129
1.	Smooth Manifolds	129
1.1.	... Deformation of structures on manifolds ...	129
1.2.	The Schouten Bracket	130
1.2.1.	Local Lie Algebras	130
2.	Associative and Lie Algebras	131
3.	Bialgebras	131
3.1.	Bicomplex of Gerstenhaber-Shack	131
3.2.	Deformations of bialgebras	132
4.	Lie Algebras	133
4.1.	Cohomology of Lie algebras	133
4.2.	Lie Algebras and Lie Coalgebras	135
4.3.	Poisson Manifolds	136
4.3.1.	Functorial properties	137
4.3.2.	Star product	137
4.3.3.	Left-invariant *-product on Lie group	137
4.4.	Poisson Lie Group	138
4.4.1.	Poisson homogeneous spaces	140
4.5.	Lie Bialgebras	141
4.6.	Manin Triples	143
4.7.	Coboundary Poisson-Lie Groups and the Classical Yang-Baxter Equation	145
4.7.1.	The Sklyanin bracket	146
4.7.2.	Classical Yang-Baxter Equation	147
4.7.3.	Quantization of Poisson structures	147
5.	Quadratic algebras	150
5.1.	Quantum matrix space	151
5.2.	The quantum matrix algebras	152
5.3.	ME and Quadratic algebras ...	153
5.4.	Quantum universal enveloping algebras	154
5.5.	Classical Yang-Baxter equation (CYBE)	155
6.	Classical integrable systems	156
6.1.	Hamiltonian systems	157
6.2.	Lax pairs	157

6.3. Dynamical system and multiplicative elements	160
7. Complex Structures	161
7.1. Complex manifolds	161
7.1.1. The Schouten Bracket	161
7.2. Poisson and Symplectic manifolds	162
7.3. Deformations of Holomorphic Vector Bundles	163
7.4. Deformations of $L_\infty$ -algebras	163
Chapter 5. Some Deformation Formulas	165
1. Baker-Campbell-Hausdorff formula	165
1.1. Group in $U(\mathfrak{g})$	165
1.1.1. Computations in $\mathfrak{sl}_2$	168
1.1.2. Quantization of Lie Bialgebras	170
1.2. BCH-formula as a Bimultiplicative Element	171
1.3. BCH formula for a central extension	173
2. Coll-Gerstenhaber-Giaquinto Formula	174
2.1. The affine group $A_1$	174
2.2. A Central Extension of the Lie algebra	175
2.3. Different coordinates	175
2.4. The CGG formula	176
3. Berezin's formula: simple natural proof	178
3.0.1. Operators	178
3.1. Deformations defined by bialgebras	178
3.2. Berezin's formula: simple natural proof	180
4. Drinfeld's formula	182
4.1. Drinfeld's formula	182
4.2. Drinfel'd formula	183
5. Kontsevich Formula	187
Bibliography	189
